

In Class (Instructor)

In Class (Students)

Begin Here.

Instructor presents the topic and solves two problems closely following the guidelines.

Instructor then divides class in groups of 3, making sure that they are balanced in terms of knowledge/skill level. They then give each group member a handout with a different part of the problem to solve.

Individually, students solve their section of the problem.

In their groups, students put the different parts of the solution together to map the graph described by the function.

OPTION: If there is time left, groups can exchange problems and evaluate each others' work.
