Begin Here.

Using the moodle quiz settings and questions provided, the instructor creates two online quizzes, one for practice (unlimited attempts) and one to be graded.
Both quizzes provide feedback for incorrect answers resulting from common errors.

The students view two videos and review slides introducing nomenclature in chemistry.

The students then take a practice quiz where they practice naming. The quizzes are generated using randomly selected questions from the question bank. They are automatically corrected.

The students may repeatedly retake the practice quiz to build confidence.

Once the students feel they have practiced enough they attempt the second quiz, which is for marks and can be taken only once.

The instructor reviews the answers to the quizzes. Incorrect answers resulting from misunderstanding are added to the corresponding question along with feedback,
